			6.9%	5.8%		8.3%	6.5% (FY2021 (full-year total))

Discussion

Each department has been able to raise awareness of environmentally friendly products, and as in the previous year, the results of activities for environmental protection have been achieved.

The company-wide purchase ratio of environmentally friendly products was 6.9% (5.8% last year), and 8.3% (6.5% last year), including the purchase of other environmentally friendly products. Approximately ¥870,000 has been spent on environmentally friendly products other than consumables, raising awareness of the need to promote purchasing.

Towards next fiscal year

We will continue to purchase environmentally compatibles products mainly for office supplies including paper products and aggregate the data for reporting. Beyond paper products we will proactively purchase broader categories of environmentally compatible products.
